VIRAL SHERATHIYA

Data Scientist

bansid.brainerhub@gmail.com +91-8140408415 Ahmedabad, Gujarat, India

linkedin.com/in/viralsherathiya github.com/Viral3899

PROFESSIONAL SUMMARY

Data Scientist with over three years of experience developing AI-powered solutions using Large Language Models, machine learning, and computer vision. Demonstrated expertise in building recommendation systems, chatbot platforms, OCR pipelines, and time series forecasting models. Strong background in Python, SQL, cloud technologies, and data visualization tools. Successfully delivered scalable solutions that improved operational efficiency and enhanced user engagement across multiple domains.

TECHNICAL SKILLS

Programming Languages:

Python, SQL

Machine Learning & AI:

Large Language Models, LangChain, LangGraph, Deep Learning, Computer Vision, Natural Language Processing, Time Series Analysis

Frameworks & Libraries:

TensorFlow, PyTorch, Scikit-learn, OpenCV, Transformers, Pandas, NumPy

Web Development:

FastAPI, Flask, Streamlit

Cloud & DevOps:

AWS (EC2, S3, RDS), Docker, Linux, CI/CD Pipelines, GitHub Actions

Databases:

PostgreSQL, MongoDB, MariaDB, Vector Databases (Qdrant, PineCone)

Data Visualization:

MLOps:

Power BI, Tableau, Matplotlib, Seaborn, Plotly MLflow, DVC, Git, GitHub

PROFESSIONAL EXPERIENCE

Machine Learning Engineer

April 2025 – July 2025

Pranshtech Solutions
Ahmedabad, India

- Developed production-ready chatbot system with specialized agents including Greeting, Closing, Counter Question, and Identity agents
- Implemented hybrid LLM architecture using local LLaMA models and cloud APIs for cost optimization and performance enhancement
- Integrated advanced meta-llama Scout model for Main RAG Agent achieving robust contextual response generation
- Built Product Intent Analysis system and Insurance Domain Analytics using structured LLM pipelines

Data Scientist

February 2025 – March 2025

Wappnet System Pvt Ltd
Ahmedabad, India

- Built AI-powered OCR system for structured data extraction with high accuracy exceeding ninety-five percent
- Developed AI Restaurant Chatbot with comprehensive ordering system enabling menu browsing and order placement
- Designed modular AI system using LangGraph with six specialized agents for complete restaurant operations
- Deployed scalable AI solutions on AWS using Docker and Linux infrastructure

Data Scientist

September 2023 – January 2025

Nexuslink Services India Pvt. Ltd.
Ahmedabad, India

- Led AI chatbot projects integrating OpenAI, LLMs, and OCR technologies to enhance web solutions
- Developed hybrid recommendation system using Two-Tower models and Faiss vector indexing
- Deployed solutions on AWS infrastructure with Docker containerization for improved scalability

- Optimized system performance achieving significant improvement in response times through efficient cloud architecture

Data Analyst

May 2022 – June 2023

Online PSB Loans (oplinnovate)

Ahmedabad, India

- Built comprehensive Management Information System dashboards monthly processing large-scale datasets using SQL, Power BI, and Tableau
- Reduced third-party report generation time significantly through automation and process optimization
- Integrated multiple data streams improving reporting accuracy and consistency across business units
- Managed AWS data infrastructure and automated data refresh processes ensuring seamless reporting workflow

KEY PROJECTS

Computer Vision Surveillance and Attendance System

Technologies: OpenCV, Python, Deep Learning, Flask, MySQL, Real-time Processing

- Developed intelligent surveillance system using OpenCV and deep learning models for real-time face detection and recognition with high accuracy
- Implemented automated attendance tracking using facial recognition algorithms with MySQL database integration
- Built comprehensive Flask-based web dashboard for monitoring attendance patterns and generating automated reports
- Created real-time alert system for security monitoring with email and SMS notifications
- Optimized image processing pipeline significantly reducing detection latency through multithreading and GPU acceleration

TiA Chatbot - Insurance Domain

Technologies: LLaMA, LangChain, OpenAI, RAG Systems, Vector Databases

- Built Agentic TIA system with modular agents using LLaMA models for smart insurance domain conversations

- Enabled smart conversations and intent analysis with hybrid local and cloud LLM support reducing operational costs
- Implemented advanced RAG system with vector databases for contextual insurance policy information retrieval
- Achieved high intent recognition accuracy and significantly reduced response time through optimized agent coordination
- Deployed production-ready system with load balancing, monitoring, and fallback mechanisms ensuring high uptime

Vibechat Smart POS System

Technologies: LangChain, LangGraph, OpenAI, Python, FastAPI, Docker

- Developed AI-powered POS system with six specialized agents for complete restaurant operations management
- Enhanced automation in order management with modular and scalable AI-driven architecture
- Implemented intelligent query handling using LangGraph for complex order modifications and customer interactions
- Built real-time inventory management system with predictive restocking recommendations
- Deployed FastAPI-based microservices architecture with Docker containerization for seamless scalability

Recommendation System for Short Videos

Technologies: PyTorch, Transformers, Hugging Face, CI/CD, GitHub Actions

- Built transformer-based NLP model for generating concise summaries with high ROUGE score performance
- Implemented collaborative filtering and content-based recommendation algorithms achieving significant user engagement improvement
- Developed real-time recommendation engine processing millions of daily interactions with sub-millisecond response times
- Deployed CI/CD pipeline with GitHub Actions for automated model deployment and performance monitoring

Food Delivery Time Prediction

Technologies: Python, Machine Learning, Ensemble Methods, AWS EC2, Docker

- Built end-to-end machine learning pipeline for predicting food delivery times based on multiple features including distance, weather, and traffic
- Developed ensemble models achieving high prediction accuracy with low RMSE
- Integrated real-time traffic and weather APIs for dynamic delivery time adjustments improving customer satisfaction
- Deployed scalable prediction service on AWS EC2 with Docker containerization handling large daily prediction volumes

EDUCATION

Master of Science in Data Science October 2021 – September 2022

Jain University

Bachelor of Technology July 2018 – June 2021

Junagadh Agricultural University

CERTIFICATIONS

- Tableau for Beginners - Udemy
- Data Science with Python Complete Course - Fingertips
- Internet of Things in Agriculture Domain - Technex, IIT (BHU)

ACHIEVEMENTS

✓ Reduced report generation time significantly through automation initiatives

✓ Achieved high accuracy in OCR data extraction systems

✓ Improved user engagement substantially through AI-powered recommendation systems

✓ Successfully deployed multiple production AI systems on cloud infrastructure

✓ Processed and analyzed large-scale datasets monthly for business intelligence
